

# Carbon heating film

Carbon heating film - The perfect solution for heating wood or laminate floors.

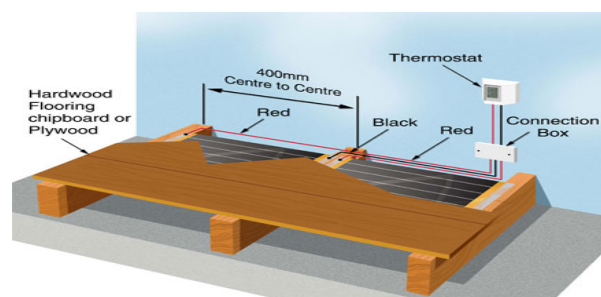

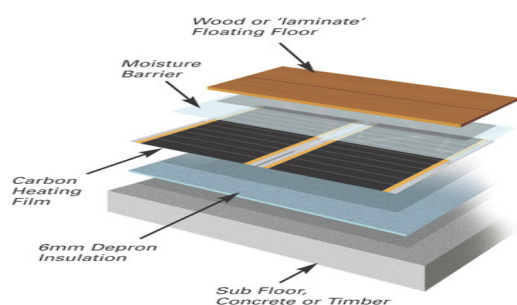

*Note: For other floor coverings, the film can be overlaid with plywood followed by the actual floor covering (e.g. carpet/vinyl)*

Our carbon heating film is ideally suited for installation beneath wood or laminate floors. It is also a popular choice under carpet & vinyl when combined with a plywood overlay.

At **less than 0.5mm thick**, it has a negligible effect on floor height. The film is usually laid over our 6mm floor insulation (which replaces the standard flooring underlay) to give a minimal effect on your floor height - less than 6.5mm! This makes it ideal for use in both new buildings & renovations/refurbishments where floor height is usually critical.

**Heat Output** - The film is designed as a heating system (not just floor warming) & gives even heat coverage of the whole floor. It is available in 800mm two power outputs 130w per sqm for ordinary home heating & 160w per sqm for conservatories where higher heat losses are experienced.

**Simple to install** - The installation of this underfloor heating is simple & can be done by anyone with even the most basic DIY skills, however an electrician should make the connections. It is simple to work with & can even be trimmed on site if required.

**Quality** - The heating film is manufactured to the highest standard and comes as a kit or bulk rolls for high volume installs & has been used worldwide for many years. It is extremely reliable & comes with a standard **TEN -YEAR** manufacturer's warranty, but should last a lifetime!

**Digital control** - The control of the heating system is via a simple to operate, digital thermostat which has a 7-day/24 hr. timer built in. The thermostat is unobtrusive & takes up the same space as a standard light switch and is available as a separate purchase. Whilst the system is mostly supplied as a 'bespoke' item with systems being made to order, we do stock complete kits ready to use, that it can also be sold as an 'off the shelf' item for most standard rooms.

## Main Advantages

- Minimal effect on floor height
- Ideal below wood/laminate but can be used below other floor coverings
- Fast acting controllable heating system
- Low cost
- Simple installation
